From the desk of the CEO

Some of the finest moments in the life of a product happen when it is acknowledged for exceeding its genre itself.

Meko has experienced this brush with excellence not once but many a time.

I attribute this rare accomplishment to the team spirit which pervades across all the sections of Meko's activities... manufacturing, quality management, marketing and customer management.

When quality becomes a habit, you simply can't go wrong.

I congratulate my colleagues and work staff for having taken Meko where it is today and for keeping their eyes in the horizon where they can see the rise of a new market leader..

Shivas Rawal, The face behind the Continuous Quality Improvement and Sustained Success of MEKO for the last 15 years.

With best wishes,
Surinder Rawal
CEO

Notes

Notes

Notes

MEKO's Fifty years of experience in only Water Pumps provides you an unmatched supreme quality. Your cooperation & support has placed Meko among the top most brands in its category.

PREVENT WATER PUMP FAILURE, WITH THESE COMMON RULES

BE SURE TO CLEAN BURRS BEFORE FIXING

Before installing the water pump on the engine surface make sure that there are no remains of the old gasket on the surface and then apply the new gasket with suitable compound.

NEVER HAMMER THE BEARING SHAFT

During the installation of the pump to the engine, many times it is necessary to tap the pump to get it aligned properly. It is important not to tap on the shaft, as this causes damage to the Bearing races and Balls, which can result in either a noisy pump and early failure or possibly a fracture of the shaft itself.

NEVER OVER TIGHTEN BELTS

Belts that are too tight cause overload shaft deflection and can result in serious failures. Always follow manufacturer's instructions when installing belts.

BE SURE FAN IS SEATED SQUARE WITH PUMP SHAFT

Fan wobble during rotation will cause shaft to vibrate contributing to bearing and shaft failure.

ALWAYS REPLACE DAMAGED FANS

Never straighten bent blades; replace complete fan. Stress cracks and loose rivets in blade can go undetected and cause complete failure. If fan breaks it can cause serious personal injuries and vehicle damage.

OTHER PREVENTIONS

- ⑩ Ensure proper functioning of thermostat.
- ⑩ Avoid dry running of water pump.
- ⑩ Maintain proper level of coolant.
- ⑩ Some small initial water dots from the pump seal may be experienced. This is normal and will cease after a short period of running when the seal becomes fully operational.

Above Precautions will ensure excellent performance of your water pump.

BEWARE OF DUPLICATE OR IMITATIVE PRODUCTS

Dear mechanic brothers

You would surely get duplicate or imitative water pump assemblies at lower price with guarantee too of no leakage. You would also get satisfied with such offerings in the market. But you must know that the water pump assembly is the heart of the engine.

If it does not qualify the engine specifications and requirements and does not maintain the engine temperature within 80±3 degree Celsius, the engine constantly moves towards the failure or collapse. By mere collecting spares parts from sub standard suppliers here and there and assembling them in small room or space using just 8 to 10 employees and then making the pump's external look similar to Meko these imitative manufactures are cheating you and also cause damage to the engine. They are not at all bothered about the maintenance of engine temperature which is actually the real function of the water pump.

The value of the product depends upon its dimensional and functional quality. Meko pump fulfills all the standard dimensional specifications and functional parameters. Meko water pump absolutely and strictly follows the standard drawings with its components entirely being machined on CNC /VMC machines and the heart of the pump the W.P seal is completely made in house as per standard specifications.

We do not trust the quality of outsourced components for which we have a big troop of technical engineers in every department like machine shop, spares parts division, assembly division and testing division.

The imitative manufacturers do not provide the functional quality that we do and that is why their product despite being cheap is profitable to them.

But Meko has always kept its promise of being superb in quality and reasonable in price.

The duplicate product which you call better priced is actually deceptive and you are being robbed of the right quality which is your true right.

मिस्त्री भाईयों, **MEKO** की बेजोड़ क्वालिटी और किफायती दामों का राज ! पचास वर्षों का सिर्फ वाटर पम्प का अनुभव और आपका साथ !!

वाटर पम्प को असफल होने से रोकें, इन साधारण नियमों के साथ

सुनिश्चित करें कि सरफेस एकदम साफ है।

वाटर पम्प लगाने से पहले जहाँ-जहाँ पुरानी गैसकेट लगी है, उसको अच्छी तरह उतार कर सरफेस एकदम साफ कर लें और फिर नई गैसकेट में उचित कम्पाउंड लगाकर वाटर पम्प लगाएं।

वियरिंग शाफ्ट पर हथौड़े से चोट न करें।

वाटर पम्प को इंजन में एलाइनमेंट करते समय बैरिंग शाफ्ट पर हथौड़े की चोट मत मारें क्योंकि इससे बैरिंग की बॉल डैमेज हो सकती है, जिससे वाटर पम्प जल्दी खराब हो सकता है या शाफ्ट टूट सकती है।

बैल्ट को कभी ज्यादा न कसें।

ज्यादा कसी हुई बैल्ट शाफ्ट टूटने का कारण बन सकती है, जिसके परिणाम गंभीर हो सकते हैं। हमेशा बैल्ट निमाता के द्वारा दी गई हिदायतों को ध्यान में रखकर बैल्ट लगायें।

सुनिश्चित करें कि पंखा पम्प शाफ्ट के साथ सीधा लगा हुआ है।

घूमते समय पंखा टेढ़ा-मेढ़ा नहीं घूमना चाहिए, जो शाफ्ट और बैरिंग के खराब होने का कारण बन सकता है और शाफ्ट टूट भी सकती है।

हमेशा टूटे हुए फैन को बदल दें।

मुड़ी हुई पंखुड़ियों को कभी भी सीधा न करें, पुरा पंखा बदल दें। अगर पंखा टूटा हुआ है या उसकी रीवट लूज है तो यह वाटर पम्प को खराब करने के साथ-साथ आपको भी जखमी कर सकता है।

अन्य ध्यान देने योग्य बातें

- ⑩ थर्मोस्टेट का उचित क्रियान्वयन निश्चित करें।
- ⑩ वाटर पम्प सूखाने न चलने दें।
- ⑩ कूलेंट का उचित स्तर बनायें रखें।
- ⑩ पम्प से कुछ आरम्भिक पानी की बूँदें सम्भावित हैं। यह एक सामान्य प्रक्रिया है। सील के पूर्ण रूप से क्रियान्वित होते ही यह स्वतः ठीक हो जाएगा।

उपरोक्त सावधानियाँ आपको वाटर पम्प के सुचारू रूप से चलने को सुनिश्चित करती हैं।

DUPLICATE या नकली उत्पादों से सावधान

प्रिय मिस्त्री भाईयों,

Duplicate या नकली Water Pump Assy. आपको जरूर सस्ती मिल जाएगी और Leakage ना होने की गारंटी भी मिलेगी। इससे आप संतुष्ट हो जाते हैं। मगर आपको ये पता होना चाहिए कि W. P. Assy. आपकी गाड़ी के Engine की जान है। अगर वह Engine के प्रमाणकों को पूर्ण नहीं करती और Engine के Temp. को 80° ± 3° Maintain

नहीं करती तो आपकी गाड़ी का Engine लगातार खराब हो रहा है। Sub-standard Suppliers से Spare Parts इकट्ठा करके एक कमरे में 8-10 व्यक्तियों के साथ Water Pump Assy. ठोक कर और दिखाने के लिए ऊपर से Meko जैसा बनाकर आपको बहुत बड़ा धोखा दिया जा रहा है और आपकी गाड़ी के Engine को खराब किया जा रहा है।

कीमत गुणवत्ता पर निर्भर करती है। Meko हर तरह से प्रमाणिकता को पूर्ण करता है। Meko Water Pump 100% Drawing को Follow करके Required Material के साथ CNC और VMC पर बनाया जाता है और हर Part या Seal भी Perfect मानकों के अनुसार बनाया जाता है। हम बाहर बने किसी Part की Quality पर विश्वास नहीं करते और हमारे हर Department & Spare Parts Division, Assy. Division & Testing Division तक Technical Engineers की फौज है। तभी तो नकली उत्पाद सस्ता होते हुए भी उन Manufacturers के लिए Profitable है। मगर Meko हमेशा आपको एक ही वादा करता है कि हम Quality Vise अति उत्तम और Rate Vise हमेशा Reasonable हैं। जिस नकली उत्पादको आप सस्ता कहते हैं वो असल में सस्ता नहीं, बल्कि आप ठगे जा रहे हैं।

Guarantee

Meko Automotive Water Pumps are manufactured in compliance with all the requirements of IATF 16949:2016 and ISO 9001:2015 quality standards to achieve the supreme performance. The company shall replace the Automotive Water Pumps free of cost provided the failure is caused due to any manufacturing defect but shall not cover product failure caused by improper installation or mishandling. This warranty does not cover any incidental or consequential damages to person or property including the cost of any related parts.
